(a) Fisher spectrum
Fisher eigenvalue
eigenvalue index
full ($\kappa \approx 4.5 \times 10^4$)
anoxic only (singular)
(b) weakest Fisher direction
loading (log / logit coordinates)
full ($\lambda/\lambda_{max} = 2.2 \times 10^{-5}$)
anoxic only ($\lambda/\lambda_{max} = 2.1 \times 10^{-17}$)
μ_H
Y_H
b_H
η_g
k_h
(c) the μ_H–η_g degeneracy
recovered η_g / true
recovered μ_H / true
$\mu_H \eta_g$ = const
anoxic only
full
(d) profile likelihood of μ_H
profiled $-\log L$ above minimum
fixed μ_H (d^{-1})
full
anoxic only
95% threshold
